

E206

For an excellent finish, longer tool life and longer sump life, use **TRIM® E206**.

TRIM E206.

- High-lubricity emulsion coolant for wide range of machining operations
- Rejects tramp oil – for increased sump life without costly additives
- Extremely stable, fine emulsion – reduces carryoff and delivers fluid to point-of-cut
- Extreme-pressure additives effectively control built-up edge (BUE)
- Soft fluid film prevents sticky ways, chucks and fixtures
- Easily recycled or disposed of with conventional methods and equipment
- Coolant residue easily removed with water or aqueous cleaners

E206. Long lasting performance.

- A manufacturer of die cast parts for a Detroit-based automotive company replaced Castrol with E206. Doing a great job for more than five years with a lower concentration of fluid, E206 has saved the customer money, solved problems with operator dermatitis, and eliminated stickiness on machines.
